Abstract

This report shows trends in US baby names. It looks at persistence and popularity of baby names and its correlation to other popular US celebrities and Netflix/ TV shows over the decades.

1. Introduction

2. Plot 1: Popular names by decade: Girls

3. Plot 2: Popular names by decade: Boys

Top 25 Boy Names per Decade (US)

Bubble size shows total babies given that name per decade

4. Plot 3: Increase in name popularity year-on-year, per decade: Girls

Top 25 Girl Names – % Increase per Decade

Red bubbles show Top 3 decade-on-decade % increases

5. Plot 4: Increase in name popularity year-on-year, per decade: Boys

Top 25 Boy Names – % Increase per Decade

Red bubbles show Top 3 decade-on-decade % increases

These plots show how year-on-year popularity of names are distributed. The 3 names that had the highest uptake per decade is shown in red. This can be compared to releases of music, movies where the name is used.

6. Spearman correlation

Figure 6.1: Figure: Spearman correlation for naming persistence over time

We can observe the Spearman rank correlations, portraying naming persistence of the Top 25 girls and boys names in Figure @ref(fig:spearman). In the early years, naming persistence was very high, with a correlation close to 1. Naming persistence decreased severely in the 1960s and stayed lower. For girls, it also decreased, but not as dramatically. Between the 1970s and 1990s, naming patterns in the United States began to shift noticeably, particularly for girls. The rise of television, pop music, and mass media exposed parents to a wider range of influences. Parents were now getting inspiration from soap opera characters to chart-topping musicians — which led to short-lived spikes in name popularity ([Abramson, 2003](#)). Names like Katina (influenced by the 1974 soap “Where the Heart Is”) illustrate how easily cultural moments could shape naming choices. This era marked a move away from traditional, family-based naming toward more trend-driven and individualistic preferences, contributing to a clear decline in naming persistence as measured by year-over-year Spearman correlations. This leads us to looking

into the correlation between the Top-100 Billoard artist names and HBO character and actor names, with popular baby names in the US.

7. Comparison with Musicians, Song Titles and Prominent Figures

Popular names such as Dorothy and Elizabeth are likely to be based on political figures, Queen Elizabeth and Dorothy is strongly associated with the character Dorothy Gale from “The Wizard of Oz,” further solidifying its place in popular culture. The 1939 film adaptation starring Judy Garland cemented the name’s popularity. Barbara Stanwyck was establishing herself as a prominent film actress, appearing in popular movies like “Stella Dallas”.

The most popular boys’ names remain those of the 12 disciples in the Bible.

I would advise the Toy Store to reconsider relying on celebrity names as a predictor of baby names, but rather rely on most common names to date.

Table 7.1: Names in Music, Film and Culture

Name	Type	Example
Donna	Song name	"Donna" - Ritchie Valens
Dorothy	Character	Dorothy Gale - The Wizard of Oz
Diane	Song	"Jack and Diane" - John Mellencamp
Barbara	Actress	Barbra Streisand
Elizabeth	Public figure	Queen Elizabeth
